Use one of the methods to flash BIOS/EC.

A. Windows x64:

1. Plug-in adapter and power-on the system to OS, make sure system power is supplied by AC adapter.
2. Copy the BIOS file to the system and unzip it.
3. Run win11\flash.bat as administrator for FW upgrading.

B. Build-in EFI Shell:

1. Prepare an USB key. (Format to FAT or FAT32 type first)
2. Unzip the BIOS file to the USB key
3. Insert the USB key to the USB port.
4. Make sure Secure Boot is Disable in BSU
5. Plug-in an adapter and power-on or reboot the system to POST (Power On Self test) screen.
6. Press <F7> key to launch Boot Menu.
7. Select Build-in EFI Shell and press <ENTER> key.
8. Run flash.nsh for FW upgrade.

For example: Assume flash.nsh can be found in fs1:\BIOS\shell, type the commands as below)

```

Shell> fs1:                <ENTER>
fs1:> cd BIOS\shell        <ENTER>
fs1:> flash.nsh             <ENTER>

```
